

Joey Kokinda

AI Engineer | Agents & Automation

610-701-1998 | j@kokinda.com | jkokinda.com | github.com/joeykokinda | linkedin.com/in/jkokinda

EXPERIENCE

AI Growth Intern

May 2026 – Jul 2026

10x (10x.so) | AI Studio

Remote

- Built an AI ad pipeline generating TikTok and Instagram video and slideshow ads in parallel, using Gemini 2.5 Pro for source-ad analysis, Claude for creative direction, Seedance 2.0 for video, and ffmpeg for assembly
- Built a format-cloning workflow that ingests a viral ad and has Gemini return a strict-JSON shot-by-shot blueprint (hook, CTA, per-shot action, wardrobe, on-screen text, voiceover), then regenerates each shot on-brand with the client's chosen avatar

Co-Founder

Jul 2025 – Present

Turtosa (turtosa.com) | AI Studio

Remote

- Co-founded a model lab currently building ai models for reverse-engineering and detection models.
- shipped as a public API with key management, per-key usage analytics, and a browser extension on the same endpoint

Hardware Lead & Developer

Sep 2024 – Present

Boiler Blockchain | Purdue University

West Lafayette, IN

- Run and maintain the club's RPC infrastructure on a self-hosted XMR and BTC node, a private Web3 endpoint that has served 10k+ requests
- Represented the club at ETHDenver 2026 and helped raise \$40,000+ in sponsorships across a 500+ member community; built and maintain boilerblockchain.org; manage the discord server

PROJECTS

Omenswap | Go, Solidity, Foundry, PostgreSQL, MCP | omenswap.com

2026

- Multi-chain swap service across Ethereum, Bitcoin, Monero, Solana, Tron, and Polygon; users send to a one-time deposit address and on-chain monitors trigger an automated payout worker
- Built a standalone Go MCP server so autonomous agents can discover pairs, quote, create, and track swaps with no SDK and no account; also shipped no-js and tor versions

Creou | Next.js, Supabase, Python, Claude, GPT-Image-2, Gemini

2026

- AI content platform that turns a chosen niche into editable TikTok slideshow campaigns and or videos
- Self-hosted Python worker handles content planning, image generation, and scheduled publishing

Pyras | Bitcoin, Monero, Cloudflare Pages

2026

- Run self-hosted Bitcoin and Monero nodes behind a public block explorer at pyras.org with live sync-status and mempool views
- Built a credential-isolating API on Cloudflare Pages Functions that injects node auth server-side and enforces a JSON-RPC method allowlist so no credentials reach the browser

Jaeger | Chrome Extension, React, Polymarket, Node.js

2025

- Chrome extension that surfaces relevant Polymarket prediction markets for any page via keyword matching, backed by a Node service that indexes and health-checks the active market set

AWARDS

1st Place, Polymarket Bounty | Midwest Blockchain Conference Hackathon (Jaeger)

2025

3rd Place, AI Agent Bounty | Hedera Hello Future: Apex (Veridex, agent security middleware on Hedera HCS)

2026

TECHNICAL SKILLS

Languages: Go, TypeScript, Python, Rust, Solidity, C

AI & Agents: LLM orchestration (Claude, OpenAI, Gemini), multi-agent systems, MCP servers

Backend & Infra: Node.js, Next.js, Docker, PostgreSQL, Supabase, Cloudflare, Linux self-hosting, ffmpeg

Web3: Hedera HCS, EVM/Solidity, Foundry, native Solana programs

EDUCATION

Purdue University

West Lafayette, IN

B.S. Artificial Intelligence | Boiler Blockchain, Purdue Hackers, ML@Purdue

Expected May 2027

Rochester Institute of Technology

Rochester, NY

B.S. Robotics (transferred to Purdue)

2023 – 2024
